

SIH 2026 — Hackathon Platform

Flow of Every Implemented Feature

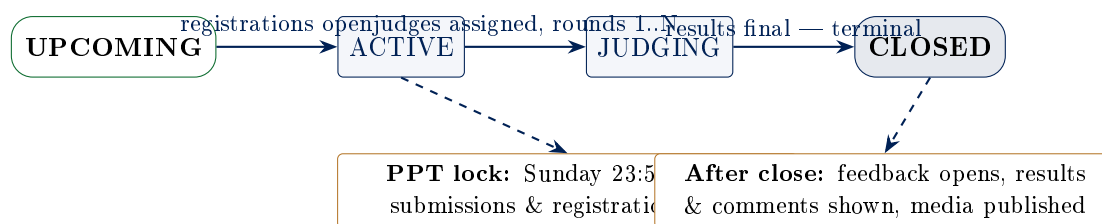

TCET Centre of Excellence for Research Culture & Development

This document traces the complete journey of every role on the portal — **Student**, **Coordinator (admin)** and **Judge** — through the system built for the SIH 2026 internal hackathon: registration with UID auto-derivation, venue and judge management, multi-round rubric judging with comments and overrides, notices, feedback and media.

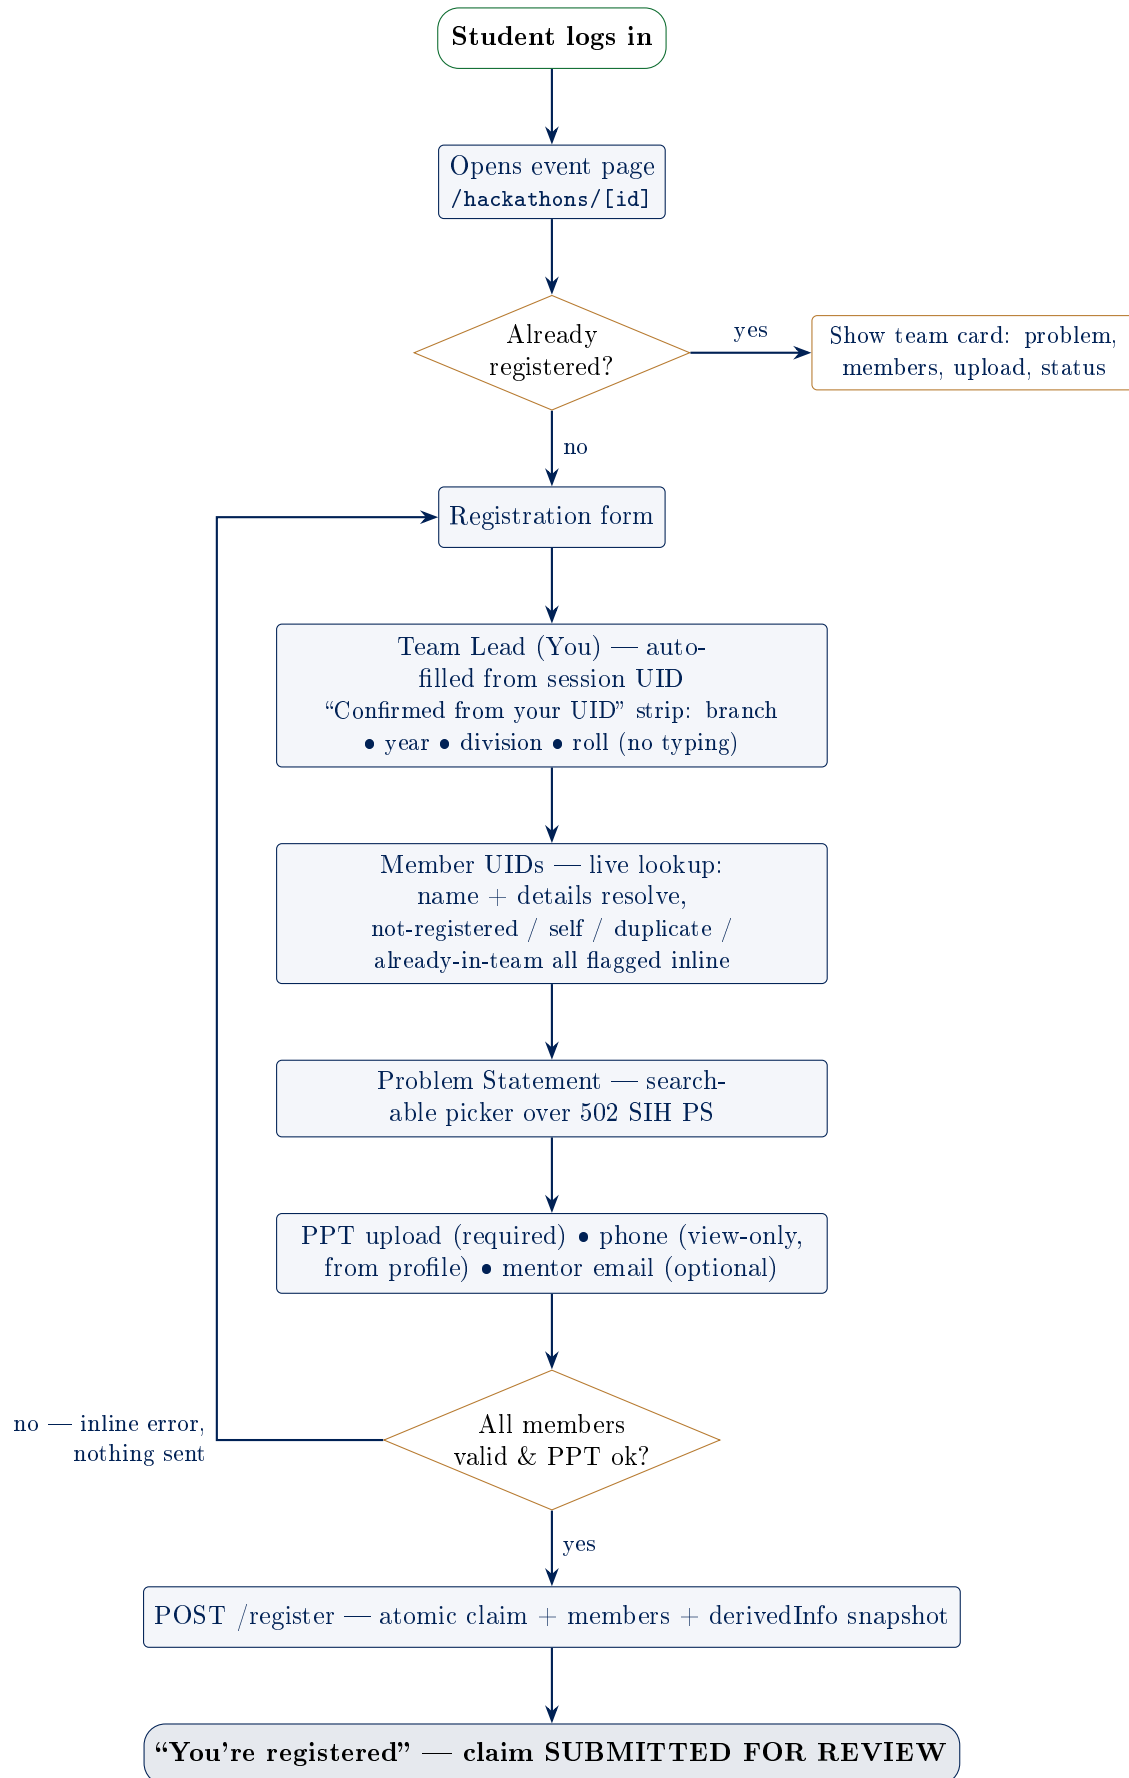

1. Actors and Modules

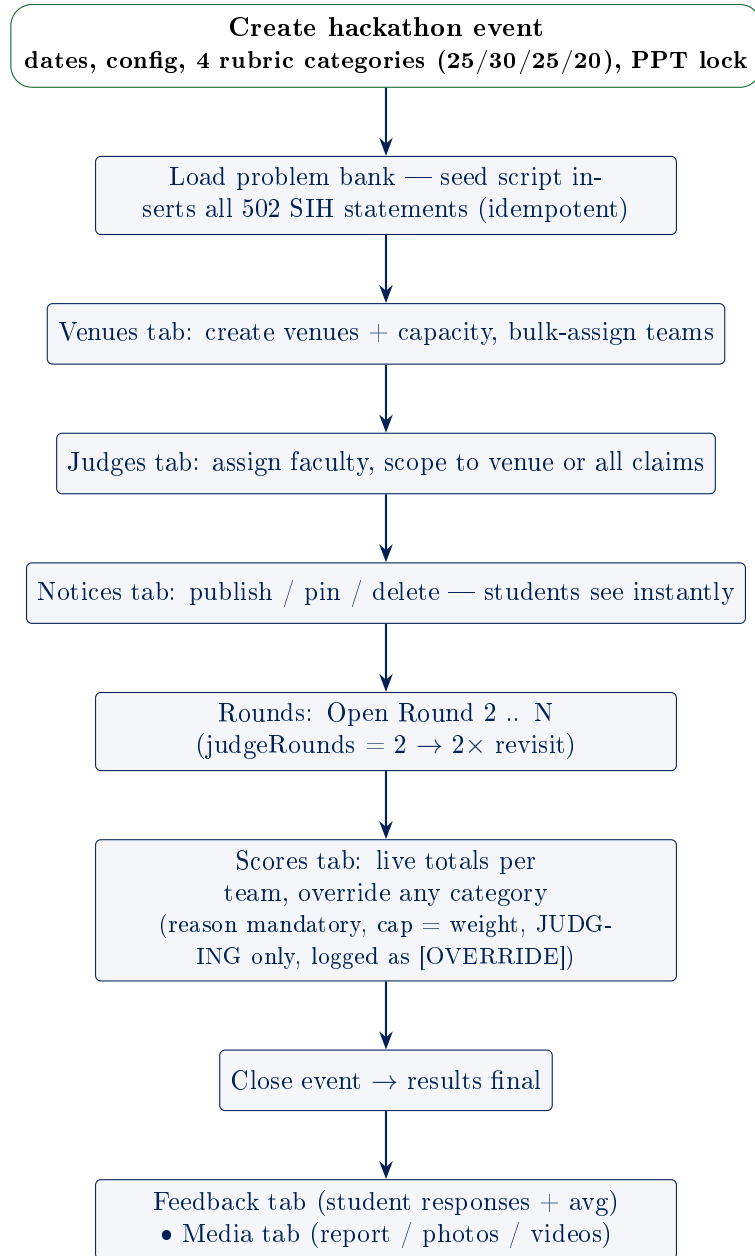

2. Event Lifecycle

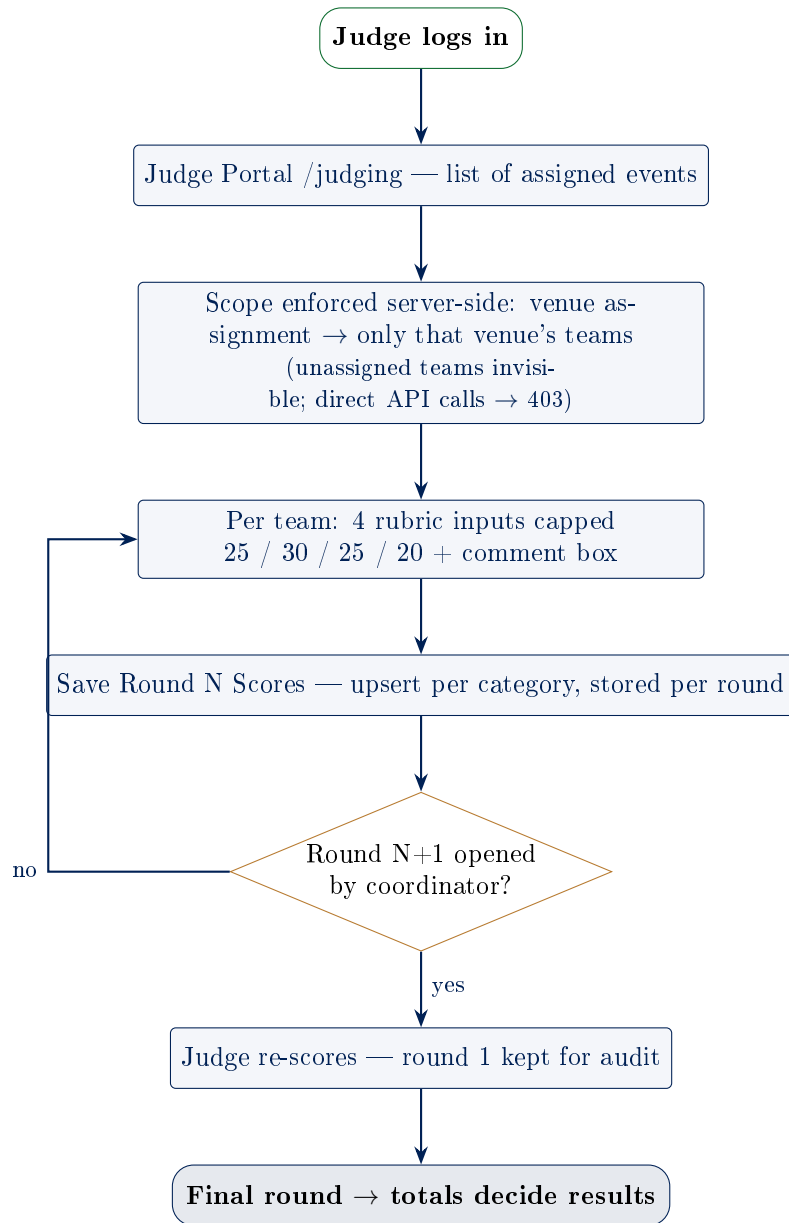

3. Student — Registration Flow

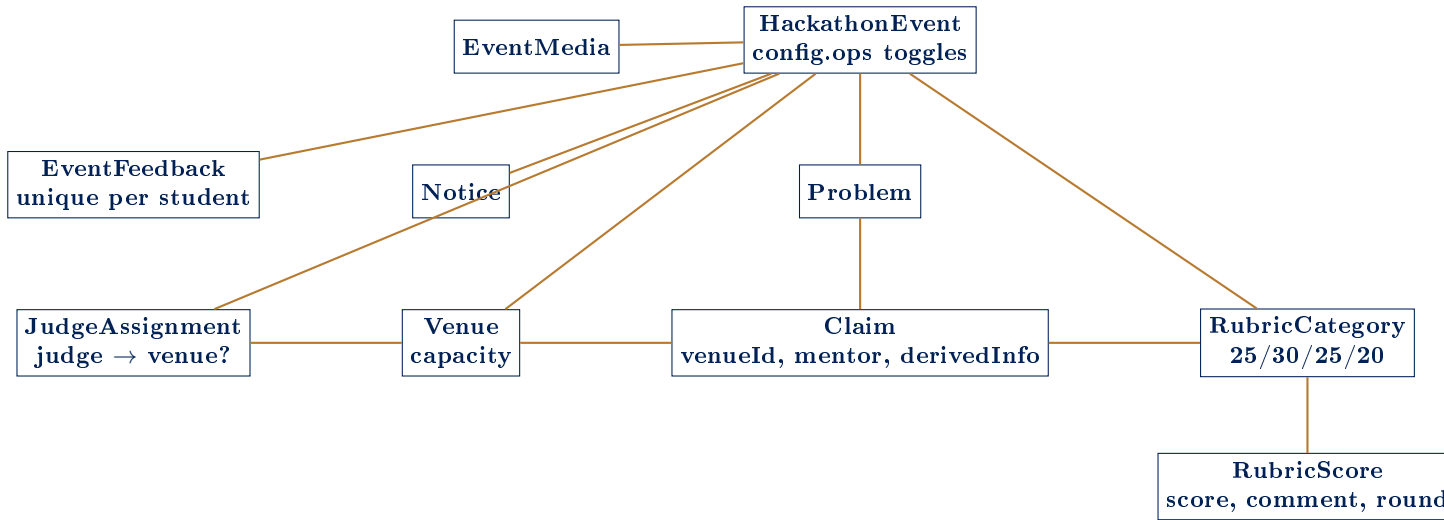

4. Coordinator Flow

5. Judge Flow

6. Data Model

7. Key Rules Enforced

- **One team per student per event** — duplicate submissions rejected (409).
- **Members must be verified registered students** — UID checked against active users; duplicate UIDs in the DB are deduped (uid is not unique).
- **PPT lock Sunday 23:59:59 IST** — submissions and registration freeze together; the portal displays *Registration closes* as the lock time.
- **Scoring caps** — every category is capped at its weight (25/30/25/20 → 100). Overrides and judge saves both enforce it (400).
- **Overrides only during JUDGING** — after CLOSED, scoring is locked (403).
- **Venue capacity** — bulk assignment is transactional and rejects over-capacity (409).
- **Rounds** — scores are stored per round; the final round is authoritative, earlier rounds retained for audit.
- **Feedback** — opens only after CLOSED, one entry per student (409 on repeat).
- **Media** — typed uploads with size limits (REPORT $\leq$ 20MB PDF, PHOTO $\leq$ 10MB, VIDEO $\leq$ 100MB); stored in MinIO and served through the auth-gated proxy.
- **Notices** — visible to every visitor of the event page; pinned notices float to the top.
